## CURRENT TRADING & OUTLOOK

## CURRENT TRADING & OUTLOOK

- As customers continue to seek value, demand for 'big ticket' discretionary items is unchanged. The Group has continued to take market share organically; LFL revenue in April and the early part of May 2024 has been in line with H1 2024 trends, with order volume growth offset by lower AOVs.
- The decline in AOV has shown early signs of levelling off, indicative of a slowdown in the shift by consumers to buy more of our own brand product range. Additionally, comparative shipping cost tailwinds have diminished over recent weeks, with both factors stabilising gross margin.
- Looking forward, the Group will benefit from revenue growth as a result of further market share gains from the acquisition of Victoria Plum, albeit tempered by a continuation of recent trading trends in the market.
- While the ongoing Victoria Plum cost reduction programme is finalised, losses from the business will have a marginal impact on Group profitability in H2 2024, therefore adjusted EBITDA in FY 2024 is expected to be broadly in line with current consensus. The Acquisition is expected to be EPS accretive from FY 2025.
- Net cash (excluding IFRS 16) at the full year is expected to be in the range of £5m to £7m, reflecting the impact of the Acquisition and investment in the DC.
